

BRAKE-LAMP

Chandelier
made from a
motorcycle
brake discs

The chandelier BRAKE-LAMP, has been suggested from a very interesting pieces of the motorcycle brakes. This brake disk has a special shape, very dynamic and complex. Based on these forms and structure I looked for a use that would enhance it. The chandelier is built around the disk already set with a lot of holes, these will serve for the steel wires which hold the lamp. In the main central hole, the light lamp will be located. The chandelier support, hanging from the ceiling, forms part of rolling blinds.

First sketches of the BRAKE-LAMP and its design

Selection of the pieces to be used

Disc brake cleaned and polished, ready to be used as a base for the chandelier

DATA SHEET FOR EACH BRAKE-LAMP

Height 46 cm, lamp excluded

Diameter width 26 cm

Installation of the main elements and finished chandeliers

Positioning of the BRAKE-LAMP

WHERE DO I PUT IT?

BRAKE-LAMP can be matched together to decorate a room. In this case, in an ancient structure being repurposed as a bar, BRAKE-LAMP become a trendy element.

They integrate easily into different spaces thanks to their essential shape and adaptability.

BRAKE-LAMP can appear slightly different according to the shape of the recovered discs; in the same way, light bulbs can be changed with ones of special shapes and colours. The result will be a little different but always very appealing.

The BRAKE-LAMP combined together can decorate a room. In this case, in the recovery of an ancient structure used as a bar, they become the trendy element characterizing a choice that go noticed.

They integrate easily into different spaces thanks to their essential shape and adaptability.
